Pràctica: Gestió Avançada de Particions

Abel Romero Martínez

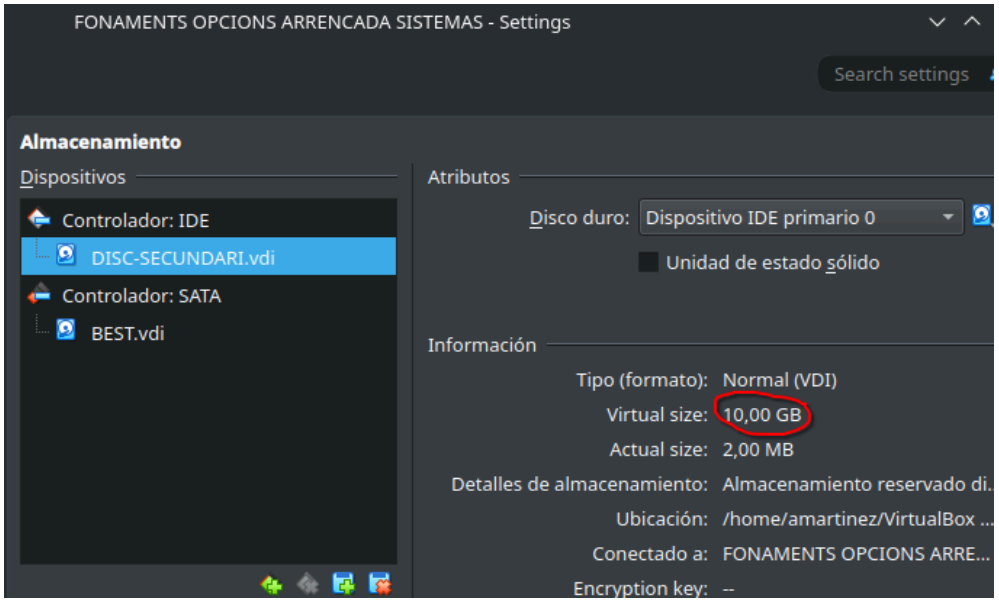
ÍNDEX

Introducció a la pràctica

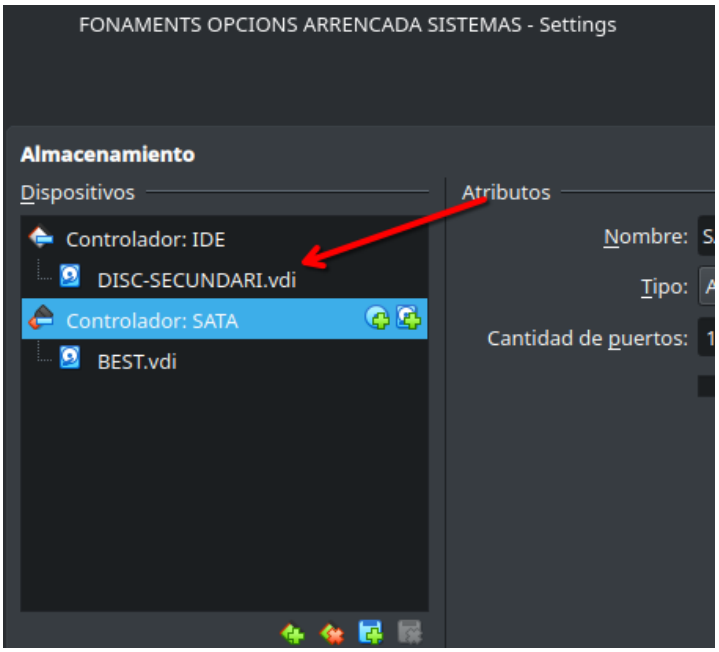
En aquesta pràctica, sobre la gestió avançada de particions, la faré amb una màquina virtual Ubuntu 22.04. L'objectiu de la pràctica és aprendre a crear, configurar i muntar particions manualment. D’aquesta manera aprendré aplicar sistemes de fitxers i configurar l'automuntatge.
Finalment, faré proves de rendiment de l’eficiència del sistema en les particions.

1. Configuració del disc virtual

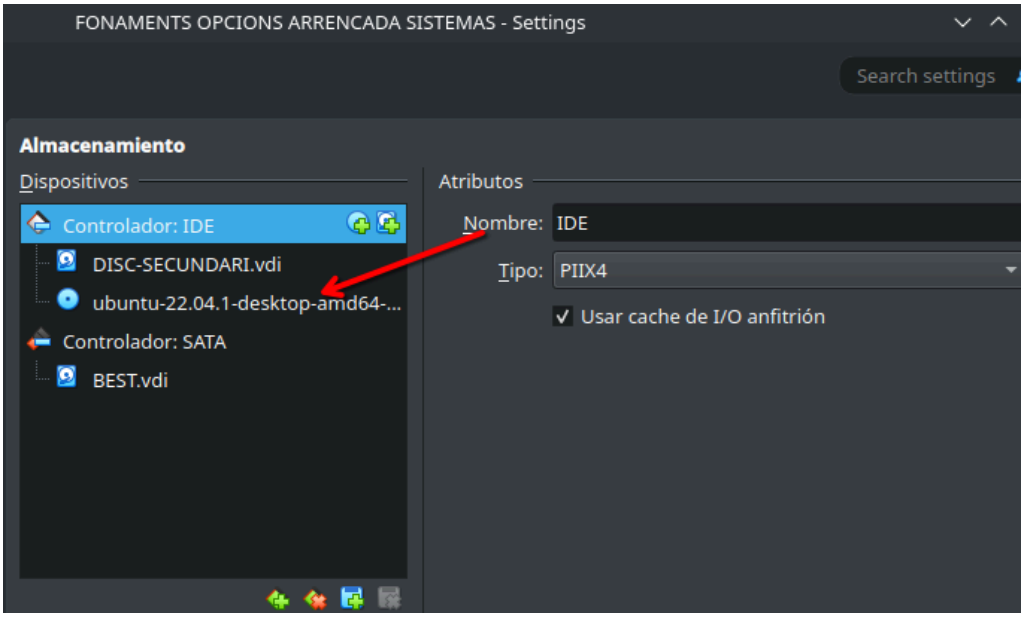
- Crear el disc virtual (disc-secundari.vdi) de mida 10 GB.



- Aquí ja tenim el nostre nou disc creat en la nostra màquina virtual d'Ubuntu.



- He afegit l'Ubuntu 22.04.1 com a disc a la màquina virtual.



- Comprovació que el disc sdb.

```
abel@abel-VirtualBox:~$ lsblk

2. Creació de particions

- Creem una nova taula de particions al disc

```
abel@abel-VirtualBox:~$ sudo fdisk /dev/sdb
```

- Posem g per crear una nova etiqueta, és a dir, una carpeta dins del disc.
  Després crem les particions seguin la guia següent:
  Partició 1: 4G
  Partició 2: 4G
  Partició 3: 2G

```
Orden (m para obtener ayuda): g

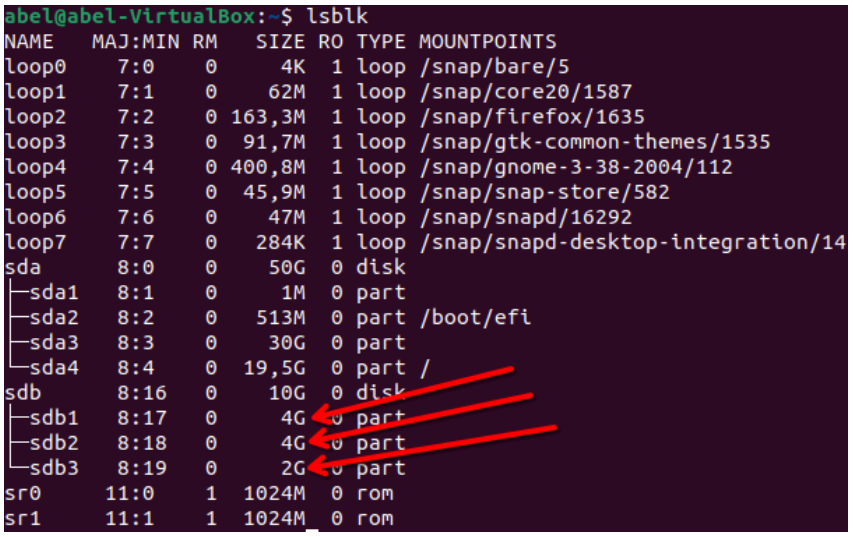
Orden (m para obtener ayuda): w
Se ha modificado la tabla de particiones.
Llamando a ioctl() para volver a leer la tabla de particiones.
Se están sincronizando los discos.
```

- Posem lsblk per veure quines particions ha creat dins del nostre disc.



```

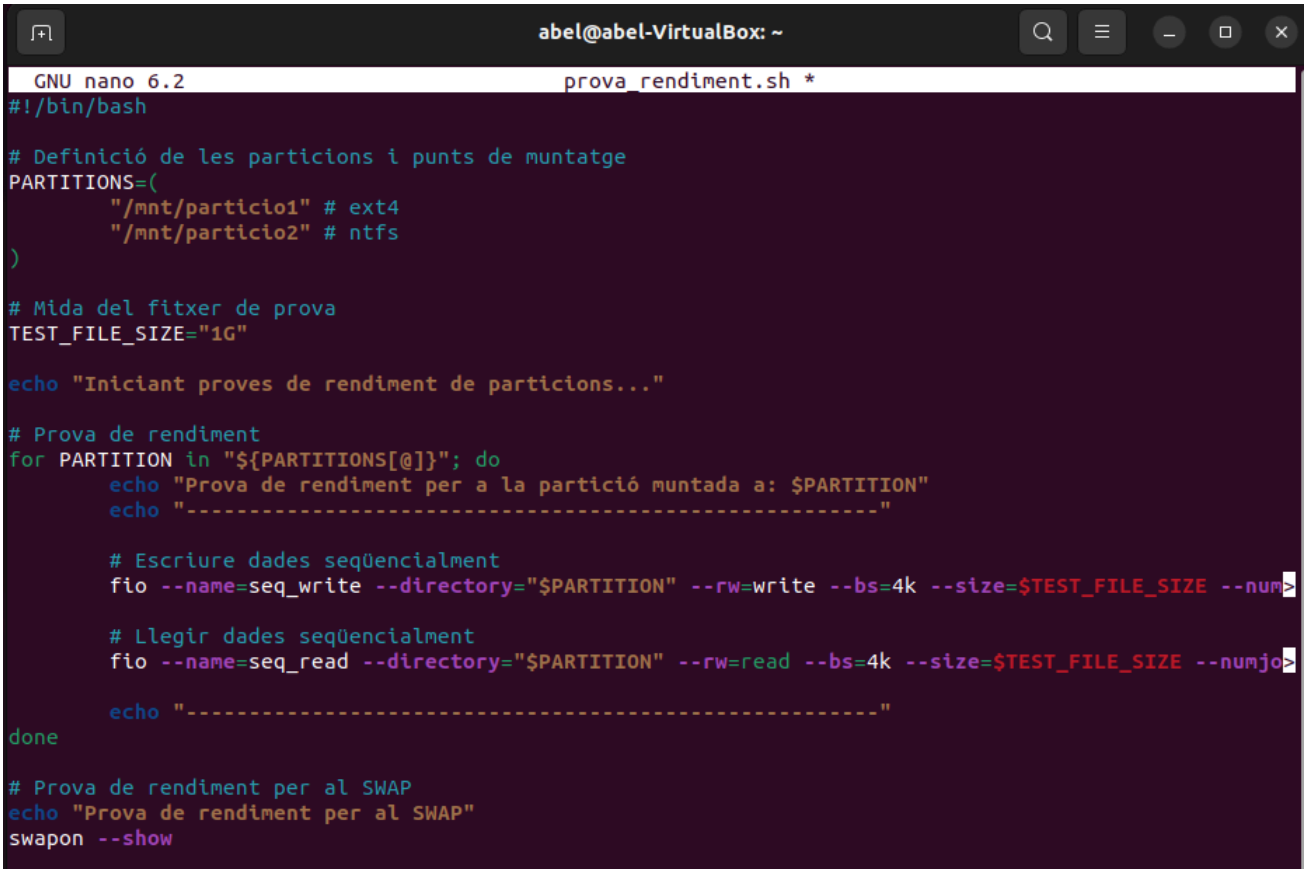
6. Anàlisi de rendiment

- Amb aquesta nova creació de fitxer li posarem les particions amb el nano i tota la informació que tenim de les particions 1 i 2. D'aquesta manera podré comprovar finalment el rendiment de les dues particions creades anteriorment.

```
abel@abel-VirtualBox:~$ nano prova_rendiment.sh
```



- Canvio els permisos perquè sigui executable.

```
abel@abel-VirtualBox:~$ chmod +x prova_rendiment.sh
```

- Executo l'escript per poder-lo veure i comparar el rendiment de les particions.

```

- Lectura: 28.2 MiB/s (7,224 IOPS)

Partició2 /mnt/particio2:

- Escriptura: 20.8 MiB/s (5,322 IOPS)
- Lectura: 1,865 MiB/s (476,154 IOPS)

Com a resum del rendiment que he fet, podem veure amb claredat que la partició 2 ha mostrat un rendiment molt superior en lectura, amb velocitats molt altes de 1,865 MiB/s. En escriptura, totes dues tenen un rendiment similar, encara que la partició 1 té una latència una mica més variable.

6. Conclusió de la pràctica

En conclusió, en aquesta pràctica he après a mesurar el rendiment del disc, a crear configurar i muntar particions de sistemes de fitxers i configurar l'automuntatge. També ser realitzar codis per configurar les particions fins a comprovar el seu rendiment.

Finalment, els resultats obtinguts en terminal mostren diferents nivells de rendiment en les particions. Ja que amb la partició 1 destaca en la lectura, mentre que la partició 2 mostra una latència controlada, amb valors més baixos de lectura, però d'escriptura una mica més alta.

En definitiva, aquesta m'ajuda a millorar amb la creació de particions i amb el muntatge i configuracions finalitzant amb una comparació dels rendiments entre les particions creades.
